产品介绍 Introduction

这种类型的电容器是胶木电容器，它是依据简单马达和简单的热力系统特制成的，它的热力系统安装了可操作的电容器(PSC部分)。它可以增加马达的启动力距，连接起来方便快捷。

This type capacitor is from bakelite capacitor based on special design for single AC motor and single phase AC heat pump system which is installed with operational capacitor (PAS component). It may increase the starting torque of motor (heat pump). It is fast and easy connected.

应用范围 Applicable Scope

简单的电路系统，操作电压110-330伏，马力1/2-10P。

Single AC heat pump system in single phase AC circuit, operating voltage scope 110V-330V, Power 1/2-10P.

产品结构 Structure of Product:

由圆柱形胶木壳子电容器和PTC部分。

Non-polar bakelite case capacitor and PTC component.
